Special Issue: **The Høylandet Reference Area**

Soils, Freshwater Chemistry, and Freshwater Biota in a Pristine, Low Deposition Area

Guest Editor: Ivar P. Muniz

The Høylandet Project – Introduction
by E. Dahl 1–3

The effects of boreal vegetation and podzolic soils on hydrochemistry at Høylandet (mid-Norway)
by H.A. Anderson, J.D. Miller, R.C. Ferrier, T.A.B. Walker, D.C. Bain, R.G. McMahon, A. Hepburn, M. Stewart, B.F.L. Smith & J.S. Anderson 5–17

Soil and stream water chemistry in a pristine and boggy site in mid-Norway
by R.D. Vogt & I.P. Muniz 19–38

On the chemical water quality in Høylandet, a reference area for acidification research
by I.A. Blakar & D. Hongve 39–47

Surface water chemistry characteristics in the Lake Storgrønningen drainage area, Høylandet, during periods of high and low discharge
by I.P. Muniz & E. Framstad 49–68

The relationship between diatoms and surface water quality in the Høylandet area of Nord-Trøndelag, Norway
by R.W. Battarbee, R.J. Flower, S. Juggins, S.T. Patrick & A.C. Stevenson 69–80

The macrobenthos of the pristine stream, Skiftesåa, Høylandet, Norway
by K. Aagaard, J.O. Solem, T. Nøst & O. Hanssen 81–94

Crustacean plankton in Høylandet
by T. Nøst & J.W. Jensen 95–111

Habitat use and life history of brown trout (*Salmo trutta*) and Arctic charr (*Salvelinus alpinus*) in some low acidity lakes in central Norway
by T. Hesthagen, B. Jonsson, O. Ugedal & T. Forseth 113–126

The ecology of brown trout and Arctic charr in two lakes in Høylandet
by J.W. Jensen, T. Nøst & I.P. Muniz 127–143

The Høylandet area – patterns and processes of a pristine boreal-subalpine ecosystem – a synopsis
by I.P. Muniz 145–154
